

Alejandro Martínez

Software engineer · Valencia, Spain

alex@konar.es

alexmj.dev

github.com/lyricalstring

linkedin.com/in/lyricalstring

STACK

CODE

TypeScript · Go · Rust · Python · Solidity

BACKEND & DATA

Bun · Elysia · Go Chi · gRPC · RabbitMQ · PostgreSQL · MongoDB · ScyllaDB · Redis

FRONTEND & INFRA

Next.js · React · Astro · Tauri · Expo · AWS · Terraform · Docker · MCP

EDUCATION

Florida Universit ria

Engineer's degree, Robotics

Jul 2022 – Jun 2024

IES L'OM

Middle School Diploma, Electrical & Electronics Engineering

LANGUAGES

Spanish native

English professional

French A2

OPEN SOURCE

Node-Discord-Bot

Discord bot framework. 140★, 3M users across 28k servers. MIT.

Lovely-Logs

Type-safe logging library — Node, browser, Lambda. Zero deps. MIT.

Ley Abierta engine

Hybrid BM25 + RAG with custom int8 SIMD C kernel. AGPL-3.0.

— SUMMARY

Software engineer. I build and ship products end to end. Most of what I've worked on has been in places where mistakes cost money or trust: government-grade crypto custody, Bitcoin data infrastructure, AI products in production. Comfortable on my own, faster in a team.

— EXPERIENCE

Trilo

2025 – present

Tech lead

Tech lead on a two-person team. Own the technical build across web, backend, mobile, desktop and a voice agent. Co-shape product direction with the founder. Live at trilo.chat.

TypeScript · Rust · Python · Bun · Elysia · Supabase · Tauri · MCP · LiveKit

Satstream

2024 – present

Sole engineer

Built and ran the data infrastructure behind several Bitcoin analytics products. Four indexers and five client SDKs in production. Other teams used it so they didn't have to deal with chain-level complexity themselves.

Go · Rust · Python · ScyllaDB · MongoDB · Postgres · Redis · gRPC · AWS CDK

Asset Reality

Jul 2022 – Feb 2024

Lead engineer

Led two of the platform's main systems within a 3-person team: the multi-sig engine that signs off every withdrawal, and the 12-chain blockchain ingestion layer. AUM grew from \$200M to \$500M during my tenure (\$1B+ today).

Go · TypeScript · React · MongoDB · Postgres · RabbitMQ · AWS · Terraform · Fireblocks

Konar Technologies

2021 – present

Founder · sole engineer

My independent engineering studio. Built and run tecpar.es, the B2B SaaS behind an electronics workshop with daily users. Also publish OSS and freelance.

TypeScript · Next.js · Prisma · Rust · Bun · Docker · Traefik

— SELECTED PROJECTS

Ley Abierta

2026

Made 190 years of Spanish law searchable in plain Spanish. 475,000 articles processed with AI summarisation and embeddings, query latency cut from minutes to under a second.

Crossflow Network

2023 – 2024

Cross-chain DeFi lending protocol I designed and shipped at Hexmount. The kind of work institutional teams spend years trying to hire senior protocol engineers for.
